Keep out of reach of children.

FIRST AID

If inhaled
- Move person to fresh air.
- If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably mouth-to-mouth, if possible.
- Call a poison control center or doctor for further treatment advice.

If on skin or clothing
- Take off contaminated clothing.
- Rinse skin immediately with plenty of water for 15-20 minutes.
- Call a poison control center or doctor for treatment advice.

If in eyes
- Hold eye open and rinse slowly and gently with water for 15-20 minutes.
- Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye.
- Call a poison control center or doctor for treatment advice.

If swallowed
- Immediately call a poison control center or doctor.
- Do not induce vomiting unless told to do so by a poison control center or doctor.
- Do not give any liquid to the person.
- Do not give anything by mouth to an unconscious person.

Have the product container or label with you when calling a poison control center, or doctor.

NOTE TO PHYSICIAN:
- This product contains petroleum distillate and may pose an aspiration pneumonia hazard.

DIRECTIONS FOR USE

BVA 2 Mosquito Larvicide does not depend on life-cycle time for effectiveness. As it kills mosquitoes, it does not develop resistance. When applied as directed this product does not leave a dark oily film.

Spray Drift Management:
- A variety of factors (e.g., wind direction, wind speed, temperature, and relative humidity) and method of application (e.g., handgun, handwand, ground or aerial) can influence pesticide drift. The applicator must evaluate all factors and make appropriate adjustments when applying this product.

Wind Speed:
- Do not apply at wind speeds greater than 15 mph at the application site.

Temperature Inversions:
- If applying at wind speeds less than 3 mph, the applicator must determine if:
  a) conditions of temperature inversion exist, or
  b) stable atmospheric conditions exist at or below nozzle height.
- Do not make applications into areas of temperature inversions or stable atmospheric conditions.

Droplet Size:
- Apply as a medium or coarser spray (ASABE standard 572), and the minimum volume mean diameter (VMD) for spinning atomizer nozzles is 0.5.

Ground Spray (Handgun or Handwand) Applications:
- Ground applications must be in compliance with the specifications indicated above regarding Wind Speed, Temperature Inversions, and Droplet Size.
- Use a nozzle height of no more than 4 feet above the ground, water surface, or crop canopy.

Aerial Applications:
- Aerial applications must be in compliance with the specifications indicated above regarding Wind Speed, Temperature Inversions, and Droplet Size.
- Release Height: Do not release spray at a height greater than 10 feet above the ground, water surface, or the tops of plants that are to be sprayed.

Boom Length:
- The boom length must not exceed 75% of the wingspan or 90% of the rotor diameter.

Swath Adjustment:
- When applications are made with a cross-wind, the swath will be displaced downwind. The applicator must compensate for this displacement at the downwind edge of the application area by adjusting the path of the aircraft upward. Leave at least one untreated swath at the downwind edge of the treated field.

TREATMENT RATES
- Apply this product at rates of 1 to 5 gallons per acre (3 to 15 fl. oz. per 1000 sq. ft.) depending on water surface conditions and vegetative density. Use 1 to 2½ gallons per acre (10 to 15 fl. oz. per 1000 sq. ft.) if trees are in green tip stage, vegetative cover is light and water is essentially clean.

To penetrate heavier or denser vegetative cover, or if water is substantially polluted, use 2½ to 5 gallons per acre (7½ to 15 fl. oz. per 1000 sq. ft.)

An average rate of 2½ to 3 gallons per acre (approximately 1 quart per 4000 sq. ft. [50 x 50 area]) to 2½ to 3 gallons per acre (approximately 1 quart per 1000 sq. ft.) will control mosquito larvae, depending on the weather and the vegetation and characteristics of the area.
