

Bolton 2010:

Mosquitoes with Eastern Equine Encephalitis (EEE) and West Nile Virus (WNV) were confirmed August 24 (EEE) and August 25 (WNV) in surveillance traps set by the Mass. Dept. of Public Health (MDPH) in the Bolton Flats area off Still River Rd. CMMCP has coordinated with the Nashoba Associated Board of Health and Bolton town officials and spraying in the northwest part of town was done during the evening of **Monday August 30, 2010 from 8pm until 10:30pm**.

Spraying was done from the roadside using pickup trucks. Information on spraying can be found here: <http://www.cmmcp.org/adulticide.htm>. The pesticide used is called Anvil 10+10, aka sumithrin. It is a low residual synthetic pyrethroid (pyrethroids are copies of natural extracts called pyrethrums found in the chrysanthemum flower and are safer to use than pyrethrums). Information on Anvil 10+10 can be found here: <http://www.cmmcp.org/anvil.htm>. Information on spraying and other effects can be found at the Mass. Dept. of Public Health's website here: <http://www.mass.gov/?pageID=eohhs2terminal&L=6&L0=Home&L1=Consumer&L2=Community+Health+and+Safety&L3=Environmental+Health&L4=Environmental+Exposure+To> – this link refers to the aerial spraying done in southeast Mass. a few weeks ago, but most of the information is pertinent.

MDPH has placed additional surveillance traps in the area including the towns of Shirley and Harvard to gauge population densities and for additional virus testing.

PLEASE CONTACT OUR OFFICE DURING BUSINESS HOURS WITH ANY QUESTIONS OR CONCERNS ABOUT SPRAYING AT (508) 393-3055 OR E-MAIL US AT cmmcp@cmmcp.org.
