

Westboro 2009:

Mosquitoes with West Nile Virus were confirmed August 14 in a surveillance trap set by CMMCP.

The town confirmed that the catch basins in the area have been treated. Spraying has been performed twice in the affected area after consultation with the Board of Health. See the map below of the sprayed areas on 14-Aug-09. These same areas were sprayed again on 20-Aug-09.

Additional surveillance traps have been set in the area to gauge population densities and for additional virus testing if possible.
