

Shrewsbury 2009:

Mosquitoes with West Nile Virus were confirmed September 10 in a surveillance trap set by CMMCP.

CMMCP catch basin maps confirmed that the catch basins in the area have been treated. Spraying has been performed in the affected area after consultation with the Board of Health. See the map below of the sprayed areas on 10-Sep-09.

Additional surveillance traps have been set in the area to gauge population densities and for additional virus testing if possible.
